Summary

Platform and systems engineer who moved hosted workloads into Docker and Kubernetes, led NOC escalations, and supported a data science team building a radar-sensing product. At Technomancy IT, build and operate client-facing services with Azure and AWS experience, repeatable container releases, and access-controlled AI integrations.

Skills

- Kubernetes · Docker · workload migration
- Azure · Microsoft Entra ID · AWS IAM
- CI/CD · deployment health checks · restore verification
- Production monitoring · runbooks · escalations
- TypeScript · Bash · Python scripting · MCP / LLM APIs

Professional Experience

Founder / Product Engineer / Systems Lead

Technomancy IT LLC

2015 - Present

- Build and operate tenant-aware services for client software and internal workflows. Set access boundaries with OAuth/OIDC and build access-controlled MCP integrations for AI and SaaS tools.
- Build container release workflows with Git-derived image tags, database migrations and service health checks. Provide hands-on cloud and production support to clients.

Senior Systems Engineer / Datacenter Architect

Front Range Internet Inc.

2015 - 2020

- Migrated hosted workloads from Hyper-V and VMware ESXi into Docker and Kubernetes. Built tooling for NOC and DevOps teams and hosting and colocation customers.
- Led the NOC, owned escalations and recovery verification, and translated operational controls into procedures and SOC 1/SOC 2 audit evidence.

Systems / Software Engineer

Office Evolution

2014 - 2015

- Built shared SQL and MongoDB applications joining CRM, provisioning, onboarding and support across office locations. Implemented VLAN-based segmentation and per-office access and bandwidth settings.

Network & Systems Engineer

PlumChoice / Everon

2012 - 2014

• Engineered and troubleshot networks and endpoints for managed-service clients. Built recurring diagnostics and handled on-call escalations directly with businesses.

Infrastructure and Systems Focal

IBM

2010 - 2012

• Supported shared enterprise infrastructure and hosted desktop platforms. Automated audit and backup work and coordinated changes with application, infrastructure and vendor teams.

Selected Projects

Radar-sensing R&D · ML team delivery

Long-term client engagement

• Handled full-stack engineering and DevOps setup and support alongside data science and ML engineers developing a contactless radar sensor. Owned the software and delivery environment scope, not model development or device firmware.

Technomancy IT · Client operations platform

Practice-owned product and operational tooling

• Built a TypeScript, Next.js and PostgreSQL platform tying together support, records and infrastructure telemetry. Its Docker release tooling tags images from Git, applies SQL migrations and checks container and HTTP health. Built a separate restore-verification tool.
